Natural Protective Shield is an **innovative product range**, specifically developed to achieve **permanent protection against microbiological contamination**.

Facilities such as shopping centres, cinemas, theatres, museums, libraries, banks, post offices, railway stations, airports and other public spaces are high-attendance places and therefore inherently hazard-prone from bacterial contamination, subsequently posing a health hazard for visitors as well as members of staff working there.

Surfaces in spaces with public attendance are most likely to be contaminated by pathogenic agents, potentially harmful to human health, and therefore **require attentive care and site-specific treatment**.

If they are not properly sanitized, surfaces such as walls, floors, glass panes, shelves, seats and countertops may become a fearsome vehicle of viral and bacterial transmission.

SHOPPING CENTRES

BANKS AND POST OFFICES

CINEMAS, THEATRES AND MUSEUMS

SEAPORTS, AIRPORTS AND RAILWAY STATIONS

This is why in the past few years **surface sanitization in public spaces** has played a **key role** within the scope of strategies to protect human health.

Welcome your patrons and protect them from microbial contamination

Advantages of NPS treatment

24/7 active

36 months' guaranteed effectiveness

Effective against micro-organic proliferation

Effective against viruses

Ideal for medical and healthcare facilities

Environment-friendly

Suitable to any kind of surfaces

Easily used on any surface

Easier sanitation and simpler cleaning operations

Lower maintenance costs
