Natural Protective Shield is an **innovative product range**, specifically developed to achieve **permanent protection against microbiological contamination**.

Means of transport such as **trains, airplanes, buses and coaches, tramways, ferries and taxis** are highly **hazard-prone from microbial contamination**, as a large number of people share small enclosed spaces there for various lengths of time.

As a matter of fact, bacteria, viruses and generally microbes may be found in transport vehicles, spreading from particles coming from outside with passengers; surfaces and upholstery fabric provide ideal conditions for them to proliferate and spread around. Thus, coming into contact with these items will increase the risk of contagion.

TRAINS AND UNDERGROUND SERVICE

TAXIS AND BUSES

SHIPS AND FERRIES

AIRPLANES

Per questo motivo, **la sanificazione delle superfici dei mezzi di trasporto ha assunto un ruolo importante** all'interno delle strategie per la tutela della salute della persona.

Let us protect passengers from microbial contamination

Advantages of NPS treatment

24/7 active

36 months' guaranteed effectiveness

Effective against micro-organic proliferation

Effective against viruses

Ideal for medical and healthcare facilities

Environment-friendly

Suitable to any kind of surfaces

Easily used on any surface

Easier sanitation and simpler cleaning operations

Lower maintenance costs
